

RANGEMATE

Medium capacity pressure systems

Single impeller, self priming jet pumps, combining substantial flow with very useable pressures. Particularly suited to applications where self priming benefits are important and the application demands a flexible operating performance. Pump internals are exceptionally strong, with brass impeller.

CTJ2-150 / 200

Equipped with electronic controller, gives constant flow with loss of prime protection.

With 24L steel pressure tank

With free standing non-corrosive pressure tank.
